Q1. Explain what the simple list component does?

<SimpleList> is an iterator component it gets an array of ids and a data store from the **ListContext,** and iterates over the ids to display each record. **<SimpleList>** can be used as **<List>** and there should be a prop function returning the text to render for each list item.

Q2. What problems / warnings are there with code?

Q3. Please fix, optimize, and/or modify the component as much as you think is necessary.
